

Appgate SDP Security Advisory

ID: 2021-01-0001

First published 2021-01-22
Last updated 2021-04-16

Title

Cumulative Security Fixes and Improvements for Appgate SDP Clients

Summary

The SDP Client exposes an unnecessary amount of information about the system which could be extracted on a compromised device.

Severity

Medium (CVSS 5.5)

Products Affected

Appgate SDP Client versions before 5.3.2 are affected.

Suggested Action

Upgrade Appgate SDP Clients to version 5.3.3 and above, particularly on deployments to non-managed devices.

Workaround and Mitigations

Multifactor Authentication while connecting (MFA at Sign-in) or as part of a Condition will render attacks useless. Appgate recommends all customers to use multi-factor authentication within SDP.

Recognition

Thanks to the following individuals for discovering and responsibly disclosing this vulnerability to Appgate:

- Eugene Lim (<https://www.linkedin.com/in/limzhiweieugene/>)
- Hui Yi Loke (<https://www.linkedin.com/in/angelystor/>)
- Max Chee (<https://www.linkedin.com/in/max-chee/>)
